

July 30, 2016

I have lived in (b)(6) and here in (b)(6) most of my life. I am currently (b)(6) and going to be (b)(6) years old. I have a perspective because I'm young and someone has to stand up for the people around here and we have to make changes. We never thought nothing of drinking water or swimming anywhere. Now, I can't drink the water or swim anywhere around here like I used to. I grew up around here and I would like to move back to this area but the way the water is I have a kid on the way and I don't want my child to get sick.

I hear people getting sick with cancer and a lot of people have been dying in this area from cancer. In the last 5 years it has gone up.

The new generation of children, the kids is what I see, people are constantly going to be getting sick. The problem can get worse if something is not done.

I have seen the irrigators spraying the brown stuff and the stuff coming onto the road in this area.

I am not putting my name on this because I don't want the harrassement and to deal with problems from other people. I don't want to be put into the situation where I have to defend myself or my family.
